

Enabling conversations about prescribed psychiatric drugs

Did your training cover working with clients prescribed psychiatric drugs?

This workshop will provide an opportunity to increase confidence in working with clients taking or withdrawing from such drugs through a deeper exploration of how and when they can intersect with the therapeutic journey. We will discuss case scenarios involving them in a variety of ways, with participants being invited to bring questions or case material around working with clients:

- thinking about taking a prescription
- the effects of such drugs on therapy
- thinking about coming off them or
- in the process of withdrawing from them

In order to enable a deeper exploration of the subject, it is necessary for participants to have read either the [Guidance for Psychological Therapists: Enabling conversations with clients taking or withdrawing from prescribed psychiatric drugs](#) or [A Short Guide to what every psychological therapist should know about psychiatric drugs](#).
